AhoyCaptain Lifeline Measurement Form

Need New Lifelines? We Make It Easy

Choose one of these options:

- 1) Complete this Measurement Form then FAX or email us for a quote.
- 2) Or for perfect results, ship your old lifelines* along with a completed Measurement Form (Page 1) and Order Form (Page 2) to:
AhoyCaptain 34 Fairfax Drive, Berkeley Heights, NJ 07922

*** IMPORTANT NOTE:** Before loosening and removing your lifelines mark the position of the turnbuckle using electricians tape around the threaded shaft.

How To Measure Lifelines:

Be sure to measure both sides of your boat as measurements often do not match from side to side. If your boat does not have gates, please measure from the eye of 'B' to the eye of 'D' upper and lower.

- 1) Measure both sides of the boat for lifeline dimensions.
- 2) Do NOT measure with ropes, use a tape measure.
- 3) Enter a brief description of lifeline set-up from forward to aft.
- 4) Please note fittings needed and any special instructions. If re-using existing hardware, please note stud diameter, thread direction and stud length.

- A = Distance from bearing surface of bow pulpit to bearing surface of stern padeye.
- B = Distance from stern rail padeye to inside of gate stanchion.
- C = Distance between stanchions (if lower gate is not wanted, please write "none" for "C" dimension).
- D = Distance from bearing surface of bow pulpit padeye to inside of gate stanchion.
- E = Distance from bearing surface of bow pulpit to bearing surface of stern padeye (lower lifeline).

Please indicate whether you prefer vinyl coated 7x7 or uncoated 1x19 lifelines: <input type="checkbox"/> Coated <input type="checkbox"/> Uncoated						
	Wire Diameter	Dim. "A"	Dim. "B"	Dim. "C"	Dim. "D"	Dim. "E"
Upper	Stbd					
	Port					
Lower	Stbd					
	Port
